

Rack N RollSM

A Deployment Solution for Healthcare Environments

Saving Time and Money Outside the Box

Once upon a time, computers came in large, cardboard boxes (with a bunch of smaller boxes inside) that you had to remove, break down and haul away. Workstation deployments were slow and expensive, and highly paid technicians labored with box cutters and screwdrivers.

This type of deployment just wouldn't cut it in a healthcare environment. Due to limited space on site and a lack of warehouse space for staging, there isn't room for all of the packaging waste. In addition, breaking down boxes creates dust and debris that is hazardous in a clinic or hospital.

Today, PDS delivers PCs, monitors and peripherals using our patented Rack N RollSM Packaging and Deployment System.

Within the PDS ISO 9001:2008 certified facility, hardware is unboxed and configured, software images are loaded, asset tags are applied, systems are tested, DMI and other asset data is captured, and the systems are Racked and ready to Roll to your location(s) according to client-specific delivery instructions.

Deployments are fast, easy and inexpensive, and legacy systems can be hauled away to be recycled using an EPA certified process. We also take patient scheduling and room occupancy into consideration and develop a deployment plan that eliminates downtime and minimizes disruption.

And the best part? Your IT analysts can focus on workflow management... not waste management.

The PDS Difference

- Reduce on-site waste and mess through clean deployment and installation
- Eliminate patient and staff disruption with strategic scheduling
- Increase efficiency of your technical staff
- Reduce labor costs for configuration and receiving
- Increase automation, accuracy and timeliness of asset information
- Reduce facility requirements and waste disposal costs
- Eliminate product damage, product incompatibilities and dead-on-arrival equipment
- Employ reintroduction programs where we warehouse, reconfigure and re-deploy your assets
- Increase potential revenue and cash back to you via recycling programs
